

Harrow Glassworks

Production and Trade Review

Harrow Glassworks Ltd - Sheffield, United Kingdom

T3 synthetic corpus - multilingual-proto-v1

explains the tank furnace process to school parties.

The works employs 118 people across melting, forming, inspection and the depot. The visitor centre pharmaceutical packaging.

Harrow Glassworks was founded in 1951 and runs two furnaces producing container glass for food and

Overview

- Output: 14,000 tonnes of container glass per year
- Gas saving from oxy-fuel: 19 percent
- Furnace 2 rebuild: 1.8 million pounds

year to the forming lines.

The batch house mixes sand, soda ash and cullet and delivers 14,000 tonnes of container glass per

19 percent. The rebuild allowed a wider choice of amber and flint glass.

Furnace 2 was rebuilt in 2023 for 1.8 million pounds with oxy-fuel burners that cut gas consumption by

Facilities

- Energy share of revenue: 28 percent
- Export share: 22 percent
- Revenue 2025: 21.4 million pounds

the lehr were prioritised.

Energy costs represented 28 percent of revenue, which is why the oxy-fuel rebuild and heat recovery on for 22 percent of turnover.

Revenue for 2025 was 21.4 million pounds, and export sales to Ireland and the Netherlands accounted
