

Larkfield Seed Bank

Conservation and Collections Report
Larkfield Seed Bank - Norfolk, United Kingdom

T3 synthetic corpus - multilingual-proto-v1

documented with collection-site coordinates.

The collection holds 41,300 accessions of vegetables, forage legumes and rare arable weeds, for plant breeding and restoration.

The Larkfield Seed Bank was established in 1996 to conserve crop wild relatives and heritage varieties

Overview

- Drying room humidity: 15 percent RH
- Backup vault: commissioned 2019
- Main vault temperature: -18 °C

percent relative humidity.

Two dormancy laboratories run germination trials and moisture studies; the drying room operates at 15 percent relative humidity, mirroring the most threatened collections.

The main vault is held at -18 °C with dew point control, and a backup vault commissioned in 2019

Facilities

- Annual budget: 740,000 pounds
- Average germination 2025: 94 percent
- Testing cycle: eight-year cycle

collection programme.

The annual budget of 740,000 pounds covers vault running costs, field multiplication and the volunteer germination rate of 94 percent across the collection.

Germination testing follows an eight-year cycle per accession, and the 2025 retests showed an average

Figures

of origin.

A seed exchange with 12 partner institutes continues, prioritising landraces threatened in their regions founding decade.

By 2027 the bank will digitise 9,000 accession records, including hand-written collection sheets from the
