

Windrush Stone Quarry

Site Report 2025

Windrush Stone Quarry - Burford, United Kingdom

P3 synthetic corpus - fusion-proto-v1

three counties.

The site employs 31 people and supplies dimension stone to builders and conservation projects across the river valley.

Windrush Stone Quarry has been worked since 1804 and covers 22 hectares of oolitic limestone above

Overview

- Benches in operation: three
- Working floor: 18 metres deep
- Crusher capacity: 240 tonnes per hour

settlement lagoons.

The working floor now lies 18 metres deep, so dewatering pumps run through the night into the level.

Working proceeds in three benches, and the 2019 crusher handles 240 tonnes per hour on the upper

Facilities

Restoration levies added 190,000 pounds to the year's accounts under the county minerals plan.

listed buildings.

Extraction reached 94,000 tonnes in 2025, of which 11,000 tonnes went to conservation repairs on

Figures

A new saw shed with two diamond wire frames is planned for the lower bench in 2027.

Restoration will flood the north void as a lake in 2031, with a public footpath along the western rim.
