

Alpha Protocol

The Alpha Protocol defines the daily calibration budget of the lab.

Rule A-one: the calibration budget is 42 units per day.

Rule A-two: unused units expire at midnight and never carry over.

Rule A-three: the supervisor of the Alpha Protocol is Dr. Irene Vogel.

Rule A-four: calibration must be logged in the ledger within a day.

The protocol was adopted in 2019 and amended in 2021 and in 2023.

The amendment of 2023 raised the budget from 38 to 42 units per day.

Before the amendment of 2021 the budget was 30 units per day.

Calibration logs are kept for five years under the protocol.

Dr. Irene Vogel signs every quarterly calibration report.

The ledger of the Alpha Protocol lives in the red cabinet.

Beta Methodology

The Beta Methodology governs how measurements are reviewed.

Rule B-one: every measurement is reviewed by exactly two reviewers.

Rule B-two: reviewers must not have contributed to the measurement.

Rule B-three: the archive threshold is 500 kilobytes per record.

Rule B-four: the review window is 90 days.

Gamma Archive

The Gamma Archive stores every reviewed record permanently.

Rule G-one: archived records are read-only.

Rule G-two: each record keeps a checksum and a reviewer pair.

Rule G-three: retrieval from the archive takes one working day.

Delta Contacts

This section lists who to contact for what.

Escalations for the Alpha Protocol go to Dr. Irene Vogel.

Escalations for the Beta Methodology go to the review board.

Escalations for the Gamma Archive go to the archive keeper.

The emergency number is printed in the entrance hall.
